Academic Year 2025-26

CERTIFICATE PROGRAM REPORT

Subject Name: JPR551MJ- Java Programming

Roll No: MC2527060

Certificate Program Title: OOPS in Java

Certificate Completed By: Omkar Manohar Dhumal

Guided By: Dr. Rupali Pawar

Objectives:

- Understand the fundamentals of Java programming and its basic structure.
- Work with Java data types and variables to store and manipulate data.
- Identify and use Java tokens, including keywords, identifiers, literals, and operators.
- Apply operators in Java to perform arithmetic, relational, and logical operations.
- Implement conditional statements such as if, if-else, and switch for decision-making.
- Use loops in Java (such as for, while, and do-while) to perform repetitive tasks efficiently.

Overview:

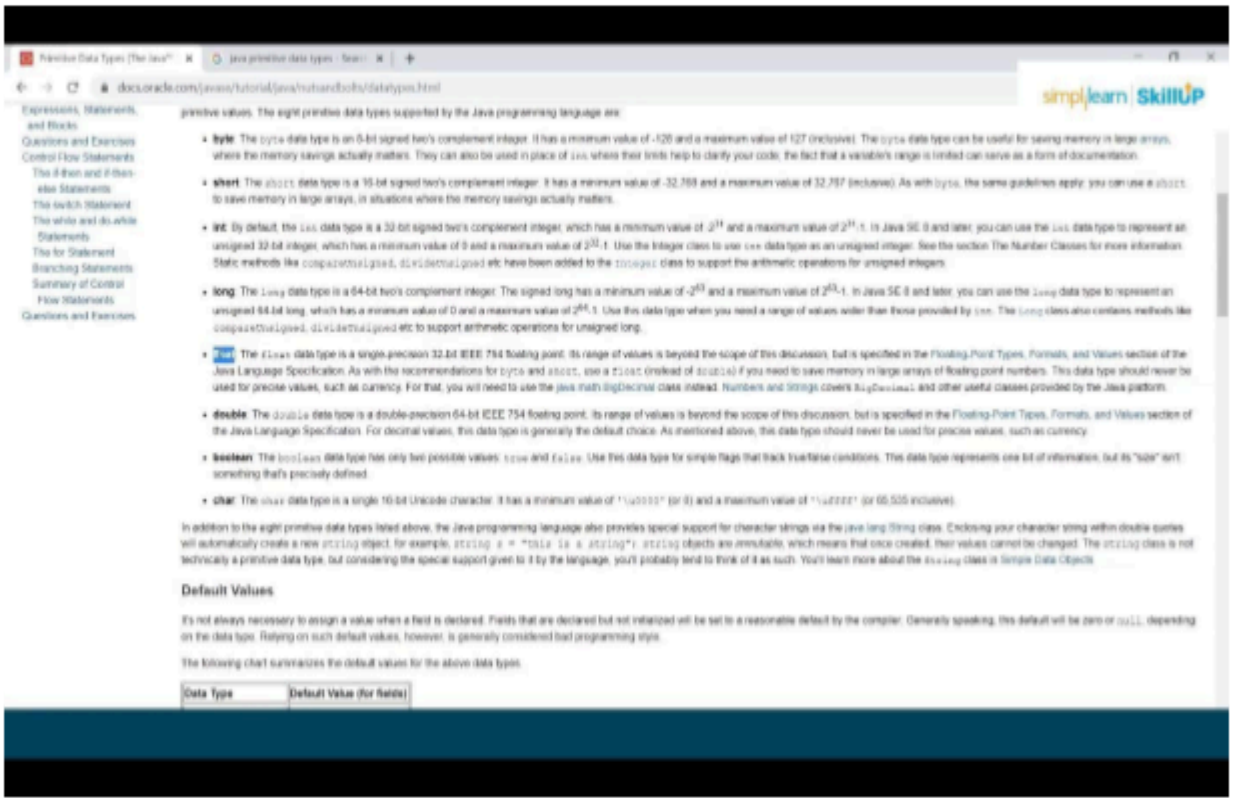
- Introduction to Java programming and its basic structure.
- Understanding Java data types and variables for storing and managing data.
- Learning about Java tokens, including keywords, identifiers, literals, and separators.
- Using operators in Java for arithmetic, relational, logical, and assignment operations.

- Implementing conditional statements such as if, if-else, and switch for decision-making.
- Applying loops in Java like for, while, and do-while to perform repetitive tasks efficiently.

Outcomes:

- Understand the fundamental concepts of Java programming.
- Work with different data types and variables in Java programs.
- Identify and use Java tokens and operators effectively.
- Implement conditional statements to control program flow.
- Use loops to execute repeated tasks in Java programs.
- Write simple Java programs using core programming constructs

Photographs:



```java
package io.github.vikeshpandey.loops;

public class EnhancedForLoop {
    public static void main(String[] args){
        int[] numbers = {1,2,3,4,5,6,7,8,9,10};

        for (int i : numbers) {
            System.out.println("Count is: " + i);
        }
    }}
```

Certificate of the Training Program:
