

Synopsis on
“Project Management System”

For
Zeal Education Society

By
Omkar Manohar Dhumal
Nikhil Suresh Devkar

Submitted to
SAVITRIBAI PHULE PUNE UNIVERSITY, PUNE
For the partial fulfillment of the internal credit work of
MASTERS OF COMPUTER APPLICATION SEM – I

Through

Zeal Education Society's
Zeal Institute of Business Administration,
Computer Application & Research (ZIBACAR)

Sr. No. 39, Narhe, Pune -411041, Phone No.:67206031
(Approved by A.I.C.T.E., New Delhi, Recognized by DTE, Govt. Maharashtra & Affiliated to S.P.P.U. Pune)

2025-2026

Project Synopsis	
A. Course Name	Masters in Computer Application (II nd Semester)
B. Student's Name	Omkar Manohar Dhumal Nikhil Suresh Devkar
C. Roll No	MC2527060 MC2527057
D. Project Title	Project Management
E. Name of Internal guide	Dr. Rupali Kalekar
F. Name of External guide	Dr. Babasaheb Mohite Dr. Pandurang Patil
G. Name of Organization	Zeal Education Society
H. Date of Submission	
Organization Profile	
1. Name	Zeal Education Society
2. Location	Narhe, Pune
3. About Organization	Zeal Education Society was started in 1996 and is a well-known education group in Pune. It offers professionals course in engineering, management, and computer applications. The society include institutes like Zeal Institute of Business Administration, Computer Application and Research (ZIBACAR), Zeal Institute of Management and Computer Application (ZIMCA), Zeal College of Engineering and Research (ZCOER). All these institutes are approved by AICTE, recognized by DTE, and affiliated with Savitribai Phule Pune University (SPPU). Zeal provides quality education that combines theory with practical knowledge. The campus has modern classrooms, well-equipped labs, and good facilities for students.

Project Details	
1. Abstract	The Project Management System is a web-based application designed to streamline and automate the project monitoring process for MCA students. The system enables the Project Coordinator (Admin) to create batches, assign faculty mentors, allocate students, and define customizable project stages such as Synopsis, Introduction, Analysis & Design, User Manual, and Final Submission. Students can upload required documents in PDF/DOC/PPT formats, and faculty members can review, approve, or reject submissions with remarks. The system provides email notifications, deadline tracking, late submission alerts, and role-based access control. This solution reduces manual paperwork, enhances transparency, and ensures systematic monitoring of academic projects.
2. Existing system	Currently, the project monitoring process is managed manually using physical documents, emails, and spreadsheets. Students submit reports directly to faculty members, and tracking submission status is time-consuming. There is no centralized platform to monitor progress stage-wise. Communication gaps may occur regarding deadlines, approvals, and remarks. Faculty and project coordinators need to manually maintain records, which increases administrative workload and chances of error.
3. Proposed system	The proposed system is a web-based Project Management System developed to centralize and automate the academic project monitoring process within the institute. The idea for this system originated during a mentor–mentee meeting, where it was observed that the management of mini projects, including batch formation, schedule tracking, notice circulation, and submission monitoring, was being handled manually. This

	manual approach made it difficult to manage records efficiently and increased the workload of faculty and project coordinators. To address these challenges, the proposed system introduces a structured digital platform with three primary roles: Admin (Project Coordinator), Faculty (Mentor), and Student (Mentee). The Admin can create and manage batches, assign mentors, upload students in bulk through Excel, customize project stages, publish notices, and set expected submission deadlines. Faculty members can view assigned students, review submissions, approve or reject documents, and provide remarks. Students can upload required documents, track stage-wise progress, view deadlines, download formats, and receive feedback. The system replaces fragmented communication methods such as manual records, spreadsheets, and informal messaging with a centralized and transparent workflow. It ensures proper role-based access control, automated deadline tracking with late submission alerts, structured approval mechanisms, and real-time notifications through email and in-app alerts.
4. Scope of the System	• The system provides secure role-based authentication with dedicated dashboards for Admin, Faculty, and Students to ensure authorized access and controlled data visibility. • The system supports structured batch creation and mentor–student assignment for systematic academic coordination. • The system enables customizable project stages with defined deadlines for organized progress tracking. • The system allows secure file upload and download to

	manage project submissions efficiently. • The system includes an approval and rejection workflow for transparent evaluation with remarks. • The system generates automated email and in-app notifications for assignments, submissions, and deadline updates.
5. Objectives of System	• To develop a centralized platform for managing the complete academic project lifecycle within the institute. • To streamline batch management and mentor–student allocation through a structured digital system. • To automate stage-wise submission tracking and status monitoring. • To enable efficient document review and structured feedback by faculty members. • To enhance coordination and communication between Admin, Faculty, and Students. • To improve administrative efficiency by minimizing manual intervention in project monitoring.
6. Environment	
a) Operating system	Windows 11
b) Front End	HTML5, CSS3, JavaScript
c) Back End	PYTHON 3.13.9 (Flask Framework)
7. Any other (please specify)	MONGODB (7.0) for Database
